Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Comment: The proenzyme consists of two identical chains linked by one or more disulfide he active site, and a heavy chain, which associates with high molecular weight (HWW) kini
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Map position: 4q35-4q35

Natl. Acad. Sci. U.S.A. 96:10984-10991(1999).
-!- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type.
-!- CATALITIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mast cell activation.
POLYMORPHISM: There are two alleles; beta-II and beta-III which differ by 3 residues.
SIMILARITY: Belongs to peptidase family SI. Tryptase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Released from the secretory granules upon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genew; HGNC:14120; TPSB2.

"Different mouse mast cell populations express various combinations of at least six distinct mast cell serine proteases.",
Proc. Natl. Acad. Sci. U.S.A. 87:3230-3234(1990)
-I- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type.
                                                                                                                                                                                                                                                                    Note=Probably non functional; SIMILARITY: Belongs to peptidase family S1. Tryptase subfamily.
                                                                                                                                         CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MAST CELL PROTEASE 6.

"Molecular cloning of dog mast cell tryptase and a related protease:
structural evidence of a unique mode of serine protease activation.";
Biochemistry 28:4148-4155(1989).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type.
-!- CATALITIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -:- SUBUNIT: Homotetramer.
-:- SUBCELLULAR LOCATION: Released from the secretory granules upon mast cell activation.
-:- SIMILARITY: Belongs to peptidase family S1. Tryptase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 canis ramiliaris (1009).

The alternatively spliced transcript is only
                                                                                                                                                                                                                                                                                                                                     Name=2; Synonyms=Truncated;
IsoId=Q02844-2; Sequence=VSP 005378, VSP 005379;
DEVELOPMENTAL STAGE: Is not expressed in mature serosal or mucosal
mast cells and is expressed only transiently at an early stage of
in vitro mast cell differentiation.
                                                                                                                   J. Biol. Chem. 271:2851-2855 (1996).
-!- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type.
-!- CATALYIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: Belongs to peptidase family S1. Tryptase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CHARGE RELAY SYSTEM (BY SIMILARITY).

Exp. Med. 185:13-29(1997).
-!- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
-!- SIMILARITY: Belongs to peptidase family S1. Tryptase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          P50343; P97593;

-!- TISSUB SPECIFICITY: Expressed in colon, lung, heart and synovial tissue. May be specific to mast cells.
-!- SIMILARITY: Belongs to peptidase family SI. Tryptase subfamily.
-!- CAUTION: Although Ref.2 reported this as a pseudogene, Ref.4 showed it is expressed and has proteolytic activity when expressed in bacterial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- FUNCTION: Tryptase is the major neutral protease present in mast cells and is secreted upon the coupled activation-degranulation response of this cell type (By similarity).
-!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBCELLULAR LOCATION: Released from the secretory granules upon mast cell activation (By similarity).

Submitted (JAN 2001) to the EMBJ/Genhank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Membrane-anchored (Potential).
-!- TISSUE SPECIFICITY: Expressed in many tissues.
-!- POLYMORPHISM: There are two alleles; gamma-I and gamma-II which differ by 5 residues.

Maffit M, Niles AL, Haak-Frendscho M;

WPI; 2002-114578/15. N-PSDB; AAS20775 DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase having an active site mutation.

Claim 8; Page 84-85; 126pp; English.

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its

enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteclytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant human beta-II tryptase active

these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutain, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for medalling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-luman tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, etc. AAII2009-AAUI2004 represent recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                    o;

This sequence is the human beta-tryptase. The invention relates to a DNA expression construct comprising (5' to 3') a promoter linked to a signal sequence which is linked to a sequence encoding human beta-tryptase. The DNA construct is useful for transforming host cells to express, post translationally process and secrete enzymatically active human tryptase. The method is useful for the production of large amounts of tryptase with defined specifications. The transformant is useful for pharmacological studies, combinatorial library screens and X ray crystallographic studies. The tryptase produced allows for the development of tryptase agonists and/or antagonists, is useful as an antigen to generate allohuman tryptase antibodies in various animals, can be used in screening for compounds which act as tryptase inhibitors, antagonists, and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists etc. may be useful as therapeutics. The tryptase does not require any post-expression or post-parification modifications or manipulations to initiate tryptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activity and it has enzymatic activity which compares favourably with cadaveric tryptase. The availability of enzymatically active tryptase facilitates the large scale screening of combinatorial libraries for specific tryptase inhibitors as potential therapeutics and advances the understanding of the biological significance of tryptase in mast cell mediated diseases. The tryptase can be used to detect low levels of
                              expression construct for production of enzymatically active

The present interaction transcess and the methods for producing these. The mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a bNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its crombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies. The enzymatically-active, generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase intibodies and in drug screening for compounds which act as tryptase inhibitors, antegonists, agonists, ctc. The present sequence represents recombinant human beta-II tryptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

```
The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic ryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The crive site mutants of proceolytic tryptase provide a rool to investigate the structural and functional properties of the procease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, and antigen active ANU12009-AAU12024 represent recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09

```
The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a secretion signal sequence which is operably linked to a secretion signal sequence which is operably linked to a becretion signal sequence which is operably linked to a becretion signal sequence tryptase with an active site mutation, in hosts transformed to construct drives expression of a mature proteclytic tryptase provide a tool to the cative site mutants of proteclytic tryptase provide a tool to investigate the structural and functional properties of the protease and its companiant proteclytic tryptase produced are useful as an antigen to recombinant proteclytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, applies Adul2009-AAU12024 represent recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA construct for producing enzymatically-inactive proteolytic tryptase, comprises DNA sequence encoding proteolytic tryptase having an active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 LEKRIVGGGEAPRSKWPWQVSLRVHGPYWMHFCGGSLIHPQWVLTAAHCVGPDVKDLAAL

```

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic cryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its encompainant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc.

The present sequence represents human beta-I tryptase

Claim 8; Page 114-115; 126pp; English.

site mutation.

The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producting these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteclytic tryptase with an active site mutation (the construct drives expression of a mature proteclytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteclytic tryptase provide a tool to investigate the structural and functional properties of the protease and its

enzymatic activity, and for modelling studies. The enzymatically-active recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, AAU12009-AAU12024 represent recombinant human beta-II tryptase active

these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAUI2009-AAUI2004 represent recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                          site mutants
